FIREBOX X

Firebox[®] X Family of Security Products

Comprehensive Unified Threat Management
Solutions That Scale With Your Business

Comprehensive unified threat management that grows at the speed of your business

WatchGuard® Firebox® X Unified Threat Management appliances deliver an award-winning combination of security, performance, ease of use, and value for your growing network. With strong security built on a solid, trusted firewall and VPN foundation, our three product lines meet a wide range of business needs:

- Firebox X Peak™ for advanced network environments
- Firebox X Core™ for corporate and branch offices
- Firebox X Edge for small businesses, remote offices, and telecommuters

Industry's Most Comprehensive Unified Threat Management Solution

Firebox X appliances provide comprehensive protection, integrating multiple security functions into a single easy-to-deploy platform. This level of unified threat management protects your network from the constant threat of malicious attacks, keeping network performance high and users productive. Security capabilities include stateful packet firewall, VPN, authentication, zero day attack prevention, gateway antivirus, intrusion prevention, anti-spyware, spam blocking, and URL filtering.

Stronger Security for Zero Day Threats

Intelligent Layered Security (ILS) provides stronger protection – the minute you turn on your Firebox X. Intelligent Layered Security uses pattern matching, protocol anomaly detection, and behavior analysis to proactively block viruses, worms, spyware, trojans, and blended threats without relying on signatures. Intelligent Layered Security is built into Firebox X Peak and Core models, and supports Firebox X Edge endpoints on Firebox X Peak and Core networks.

With it you get zero day protection from DoS and DDoS attacks, as well as the ability to dynamically block attack sources and cloak vital server information. It provides a level of protection unmatched by solutions that rely solely on attack signatures, closing the window of vulnerability before new signatures are available.

Upgradeable and Expandable Platform

The Firebox X family protects your network while also protecting your security investment. As your needs grow or change, you can easily increase the capacity of your Firebox X or add more security capabilities with a simple license key. Upgrade to any higher model within the line for greater firewall or VPN throughput without having to go through a costly physical redeployment. You can also use license

keys to easily add features and capabilities as needed, including gateway antivirus, intrusion prevention, and URL filtering.

Fireware™ Pro, our advanced operating system, extends and expands the capabilities of Intelligent Layered Security. It offers enhanced security features, advanced networking capabilities, and support for security services such as Gateway AntiVirus/Intrusion Prevention Service (Gateway AV/IPS) with anti-spyware, WebBlocker, and spamBlocker. It also provides improved management features in WatchGuard System Manager. Fireware Pro comes bundled with all Firebox X Peak appliances, and is available as an upgrade to Firebox X Core.

Intuitive and Easy to Use

WatchGuard System Manager (WSM) makes it easy to configure and manage Firebox X security appliances and security services, simplifying and streamlining network security for the IT expert, while providing indispensable ease of use for novices.

Firebox X appliances can be installed quickly and seamlessly into your network, with easy setup wizards and smart security defaults that keep your network safe from the minute traffic starts flowing. WatchGuard System Manager also makes it easy to tailor configurations to meet your specific business requirements. Features such as drag-and-drop VPN creation and intuitive configuration screens are easy to use and understand, resulting in a more secure system.

Our flexible centralized logging supports industry standard formats including XML, Syslog, and WebTrends/WELF. Logs are delivered securely and reliably over an encrypted channel, and can be viewed, filtered, and sorted in real time. Historical HTML-based reports provide analysis of trends, while our interactive, real-time monitoring tools allow you to instantly identify problems and take preventive or corrective action to stop network threats.

Expert Guidance and Support

WatchGuard LiveSecurity® Service is the most comprehensive bundled support offering in the industry. This subscription-based service offers up-to-the-minute security warnings, software updates, technical support, advance hardware replacement, training and tutorials, and self-help resources. With tools and ongoing expert advice on best security practices, you get more than just a Firebox X from WatchGuard – you get a security partner. For more information, visit www.watchguard.com/aboutLSS.

Firebox® X Peak™

Powerful Security for Advanced Networks

Firebox X Peak is the highest-performance line of Unified Threat Management appliances from WatchGuard. Powered by Fireware Pro, the WatchGuard advanced operating system, Firebox X Peak integrates the powerful security capabilities of Intelligent Layered Security with advanced networking features to provide the protection that more complex networks require. By adding Gateway

AV/IPS with anti-spyware, you get an additional layer of signature-based protection. It identifies and blocks malicious network traffic and code such as viruses and application exploits, including instant messaging and P2P usage, in real time. Add spamBlocker and WebBlocker for a complete Unified Threat Management device. Three models are available: X5000, X6000, and X8000.

Gigabit Performance With gigabit interfaces and up-to-gigabit throughput available, Firebox X Peak provides the performance, reliability, redundancy, and port density that high-speed, demanding networks require. Model upgrades are available to increase performance without hardware replacement. Hardware-based VPN encryption provides performance without requiring an optional add-on accelerator card.

Firebox® X Core™

Our Proven, Trusted Foundation of Security

Firebox X Core is our best-selling, integrated line of security appliances for corporate and branch offices. Firebox X Core comes with the WatchGuard Firebox System standard operating system, and is upgradeable to Fireware Pro. Four models are available: X500, X700, X1000, and X2500.

Unified Threat Management Firebox X Core integrates stateful packet firewall, zero day attack prevention, VPN, gateway antivirus, intrusion prevention, anti-spyware, spam blocking, URL filtering, and user authentication into a single appliance. With an upgrade to Fireware Pro, Firebox X Core offers multi-WAN load sharing and interface failover, traffic management and prioritization, high availability, and full port independence to help you achieve maximum network uptime, intelligent resource management, traffic optimization, and better control over your bandwidth usage.

Easy to Use and Deploy Firebox X Core is powerful, yet easy to deploy and manage with WatchGuard System Manager. Smart

Firebox® X Edge

Superior Firewall and VPN Endpoint Protection

Firebox X Edge is a firewall and VPN endpoint solution for small businesses, remote offices, and telecommuters. It's easy to set

up and configure with a browser-based user interface and configuration wizards, and VPN tunnels can be created quickly with WatchGuard System Manager's drag-and-drop VPN tunnel creation. Three wired models are available: X5, X15, and X50. Three wireless models are available: X5w, X15w, and X50w.

VPN Endpoints Firebox X Edge is the ideal endpoint for Firebox X Peak and Core that extends a secure tunnel to safely connect telecommuters and remote offices, and uses 3DES encryption to securely connect mobile users.

Home/Office Separation Firebox X Edge can be configured to

Proven technology in a reliable, robust security platform. An easy-to-use interface and superior customer support. That's the WatchGuard® way.

Advanced Networking Firebox X Peak intelligently manages resources, optimizes traffic, and increases network uptime. Multi-WAN load sharing and interface failover increase performance and reliability, while dynamic routing (BGP, OSPF, RIP), traffic management and prioritization deliver superior network capabilities for mission-critical servers throughout your network. Any of the ten ports can be configured as External, Optional, or Trusted, providing the flexibility to physically segment your network along users, groups, departments, and servers.

Supporting a Wide Range of Network Environments

The Firebox X family of security appliances offers support for a broad range of network environments, including corporate headquarters or branch office businesses, multi-branch franchises, co-location sites, data centers, and home offices. The Firebox X family can support any performance or port configuration requirement, and also offers solutions for standalone sites, remote user VPN access, and site-to-site VPN. With a variety of advanced networking features available across the product line, such as WAN failover, VPN, and dynamic and static Network Address Translation, Firebox X security solutions can meet the needs of any growing business.

The WatchGuard® Story

Safe and trusted networks – everyone needs them to conduct business. Regardless of size, industry, or location, companies need proven security solutions that instill trust through powerful protection, from a company known for excellent service, support, and reliability. That's why they turn to WatchGuard. Since 1996, WatchGuard Technologies has provided best-in-class network security solutions for customers in 150 countries worldwide. Our Firebox X family of Unified Threat Management appliances delivers the industry's best combination of strong security, intuitive ease of use, and expert guidance and support.

Stronger Security

With our Intelligent Layered Security, you'll get a powerful combination of zero day attack prevention and continually updated security services for the most comprehensive Unified Threat Management appliances available. Our continued innovation has provided products and services that set the standard for keeping networks safe and secure.

Ease of Use

Our intuitive interface simplifies and streamlines network security for the IT expert, while providing indispensable ease of use for novices. With easy set-up, smart defaults, and helpful wizards, you're up and running and secure in minutes, not hours. And unified management views let you easily keep tabs on your security and all your appliances – in real time.

Affordable Solutions, Designed for Your Business

Our solutions provide a full range of integrated security capabilities. Simplified deployment and management lower training and administration costs for our competitively priced security products. When your performance or security requirements increase, our Firebox X products are model upgradeable and expandable. Upgrade to a higher model within a product line, or add layers of security with gateway antivirus, intrusion prevention, anti-spyware, URL filtering, and spam blocking in minutes, using simple license keys. Our innovative solutions protect your business and your investment.

Experts in Security

WatchGuard has firmly established credentials as a pioneer in the network security industry, being among the very first to deploy security in an appliance form factor in 1996. When you partner with WatchGuard, you have a world-class team of security experts by your side every step of the way, working to keep you protected against current and future threats. Our goal is to keep your business safe and your networks trusted, now and in the future.

Other WatchGuard Security Appliances

Firebox® SSL VPN Gateway gives you hassle-free, universal remote access – without compromising security. Get the best of IPsec and SSL VPN without the limitations of either, in a one-box solution.
